

Standard Deviation

Spencer Gilliam

February 2019

1 Equation

The standard deviation function, $\sqrt{\frac{1}{N} \sum_{i=1}^N (a_i - \mu)^2}$

2 Description:

Determines the variation in a set of data, where μ is the mean, and x_i is the data at the given index i , and N is the number of data. To find it, you calculate the sum from 1 to N of $(a_i - \mu)$, then square it. After that, you simply divide by the number of data, and take the square root of it.
